

WHAT IS CLAIMED IS:

1. A shielded cable comprising:  
first signal wires for transmitting digital  
signals of a relatively high frequency;  
5 second signal wires for transmitting digital  
signals of a relatively low frequency; and  
a conductor with which said first and second  
signal wires bundled in a state of being electrically  
insulated from each other are collectively covered,  
10 wherein said first signal wires are placed  
adjacent to said conductor and adjacent one to  
another.
2. The shielded cable according to claim 1,  
15 wherein said first signal wires are twisted pairs.
3. The shielded cable according to claim 1,  
wherein a clock signal of 10 MHz or higher and a  
plurality of data signals synchronized with the clock  
20 signals are transmitted through said first signal  
wires.
4. The shielded cable according to claim 1,  
further comprising connectors for connection at its  
25 opposite ends, each of said connectors having  
connector pins being connected to said first and  
second signal wires, said first signal wires being

connected to particular ones of the connector pins  
which are adjacent one to another.
